

Exploring the data dashboards

The NNHLA interactive dashboard provides access to **quarterly reports and State of the Nation** analysis — covering **performance indicators and data quality** metrics — allowing users to monitor trends, benchmark against peers, and download data and reports in one accessible platform.

In this poster, we demonstrate how to navigate the dashboard and highlight its core features.

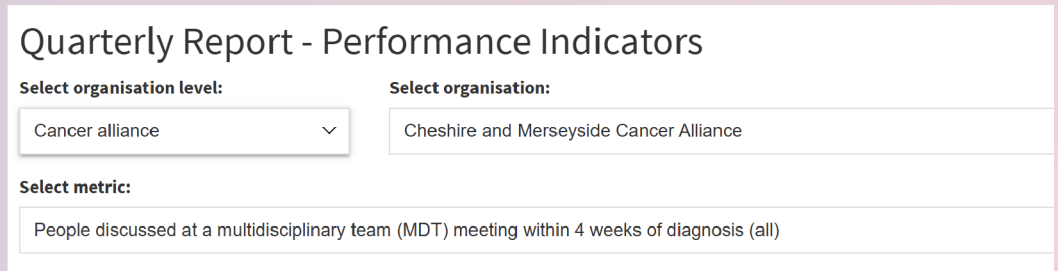

1 Navigation

Use the left-hand **sidebar** to move between different sections.

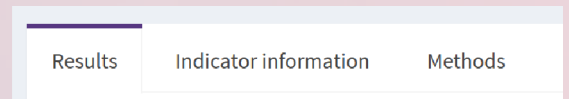

2 Selection Panel

Filter results by organisation level, healthcare provider, and metric of interest from **dropdown menus**.

3 Detail Tabs

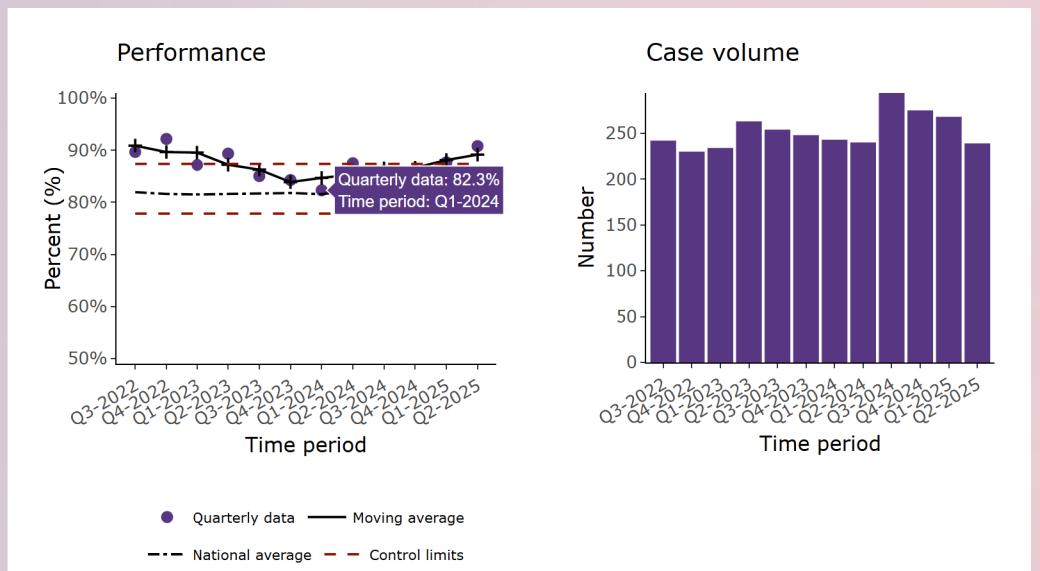

Switch between tabs to access results, indicator details, and methodology.

4 Interactive Charts

Results are displayed using interactive charts, allowing you to:

- ✓ **Hover** over data points to reveal exact values
- ✓ **Zoom in** to focus on specific time periods
- ✓ Click the legend to show or hide individual elements

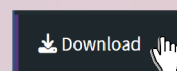

5 Data Table

Underneath the charts, data tables present **key statistics** — enabling comparison and quick review.

6 Report & Data Downloads

Reports and data can be downloaded for any healthcare provider across all metrics. Multiple export formats are supported to enable flexible sharing. You can find the download section on the navigation sidebar.
